Topics

- Introduction to GraphQL
- AWS AppSync

GraphQL

Traditional (REST) APIs

GraphQL

```
query {  
  getUser(id: 1) {  
    name  
    email  
    avatar {  
      url  
      width  
      height  
    }  
    addresses {  
      street  
      postCode  
      city  
    }  
  }  
}
```

Types of queries

Queries

```
query {
  getUser(id: 1) {
    name
    email
    avatar {
      url
      width
      height
    }
    addresses {
      street
      postCode
      city
    }
  }
}
```

Mutations

```
mutation {
  createUser(
    user: {
      name: "John"
      email: "john@example.com"
    }
  ) {
    id
    name
    email
  }
}
```

Subscriptions (Pub/Sub)

```
subscription {
  onUserUpdate(id: 1) {
    name
    email
  }
}
```

AWS AppSync

What is AWS AppSync (and why you should use it)?

- Fully managed GraphQL service by AWS
- It's Serverless! (Pay per usage)
- It scales!

Data sources

DynamoDB

Lambda

OpenSearch
(ElasticSearch)

Aurora

HTTP

None
(Local resolver)

Resolvers

```
{
  getUser(id: 1) {
    name
    email
    avatar {
      url
      width
      height
    }
    orders {
      date
      total
    }
  }
}
```

DynamoDB

Lambda

Authentication & Authorization

Cognito

IAM

OIDC

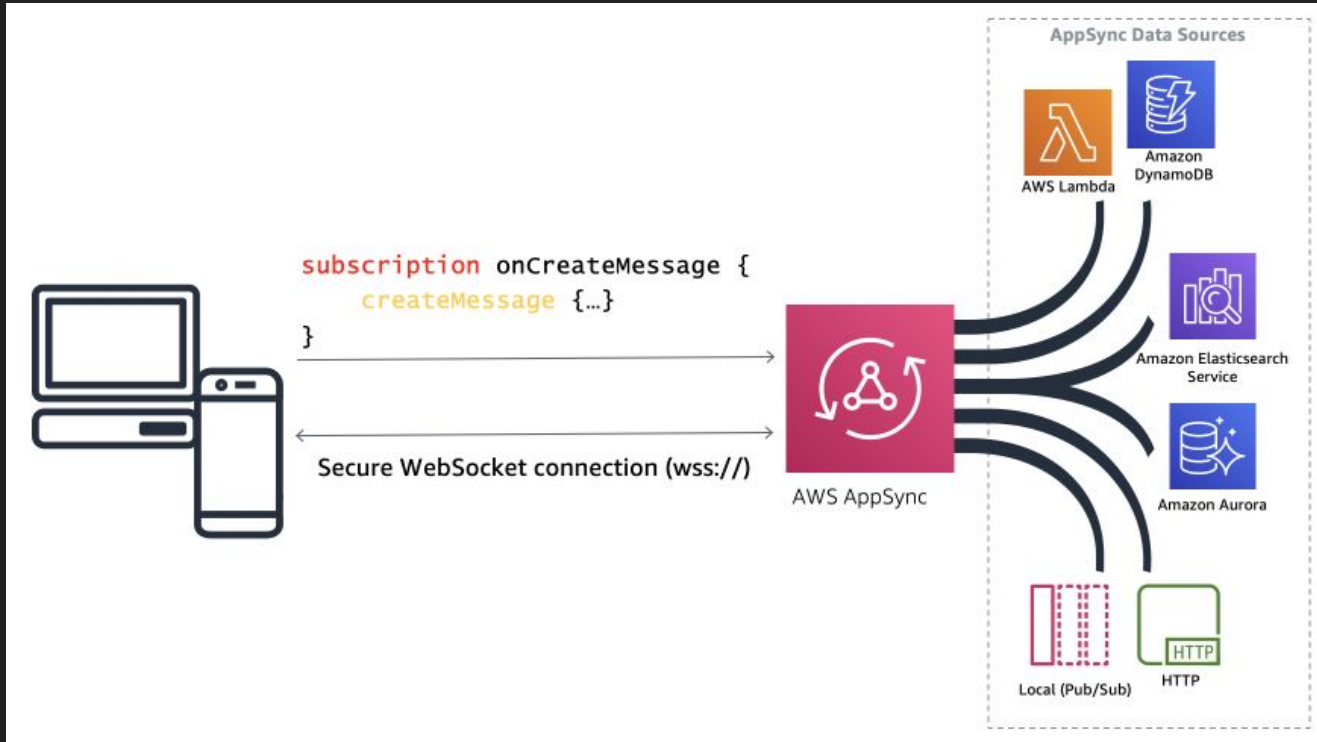

API Key

Lambda

Subscriptions (Pub/Sub)

Cache

- In-memory caching capability
- Full request or per-resolver cache
- Caching keys: Arguments and user identity
- Time-to-live: up to 1 hour

Developer tools

Deployment

- Amplify CLI
- AWS SAM
- CDK
- Serverless Framework
- CloudFormation

Client-side libraries

- AmplifyJS
- Apollo Client
- graphql-code-generator
